DIESEL EXHAUST FLEET (D.E.F.)

AUS-32, ISO 22241

Diesel exhaust fluid (D.E.F.) is an aqueous urea solution made with 32.5% urea and 67.5% deionized water. It is standardised as AUS 32 (aqueous urea solution) in ISO 22241. D.E.F. serve as reduction agent is selective catalytic reduction (SCR) in order to lower NO_x concentration in the diesel exhaust emissions from diesel engines. Urea reduces NO_x to pure Nitrogen and water. SCR makes engines work more efficiently. NO_x levels coming out of the engine are driven up which decreases the generation of particulate filter regeneration which burns extra fuel and allows the engine to run cooler.
